

# Lab 06: State Management

Due: At the end of the assigned lab session

## Lab Assignment:

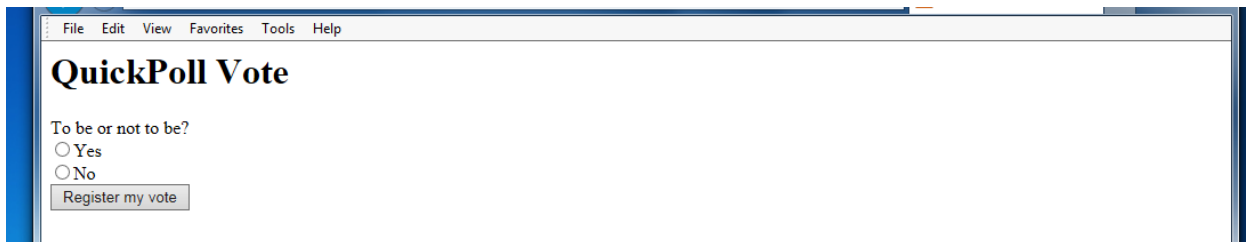

This final lab practices the management of session state information (Chapter 15). Design and implement a simple polling application that has the following features:

1. A page `register.html` allows a user to register a simple yes/no question. Every time a new question is registered, the vote tallies will be reset to zero.

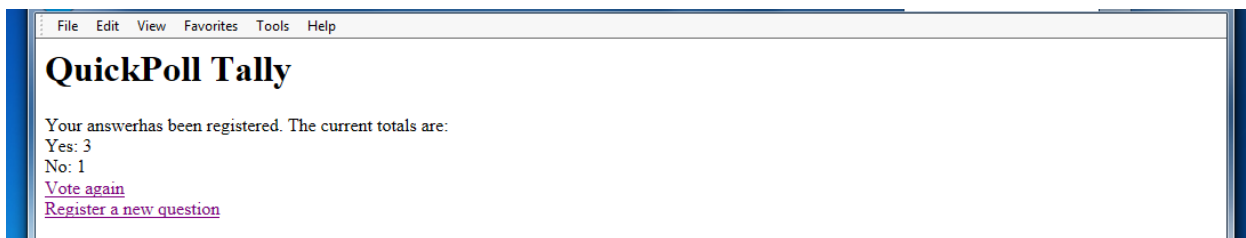

A screenshot of a web browser window showing a page titled "QuickPoll Question Registration". The page has a menu bar with "File", "Edit", "View", "Favorites", "Tools", and "Help". Below the title, there is a text input field with the placeholder text "What is your question?". To the right of the input field is a question mark icon. Below the input field is a button labeled "Register my question".

2. Once that question has been submitted, the user is prompted to answer the question, using radio buttons (allowing only "Yes" or "No" as answers).

A screenshot of a web browser window showing a page titled "QuickPoll Vote". The page has a menu bar with "File", "Edit", "View", "Favorites", "Tools", and "Help". Below the title, there is a text input field with the placeholder text "To be or not to be?". Below the input field are two radio buttons labeled "Yes" and "No". Below the radio buttons is a button labeled "Register my vote".

3. Once a user registered a vote, a page will be displayed that will tally the current yes and no votes. Also, the user is given the opportunity to vote again or to register a new question.

A screenshot of a web browser window showing a page titled "QuickPoll Tally". The page has a menu bar with "File", "Edit", "View", "Favorites", "Tools", and "Help". Below the title, there is a text input field with the placeholder text "Your answer has been registered. The current totals are:". Below the input field, there are two lines of text: "Yes: 3" and "No: 1". Below the text are two links: "Vote again" and "Register a new question".

The lab requires you, therefore, to maintain the question and the current vote totals as state information across multiple pages. You can choose to use any approach discussed in class or the textbook.

## Submission:

Submit your solution on Brightspace, under Lab 6 Submission in the submodule for this lab as a single ZIP file. The user should be guided through the interactions, no need to know the names/URLs to access all other pages.
